“A TRAY OF WEDGE-WOOD QUALITY CHICKS”

Poultry Profits

Thousands of poultry raisers look forward to receiving our yearly service book, “Poultry Profits.” This service book contains in compact form the results of years of experimental work in poultry. If the suggestions and advice offered is carried out you will realize greater profits from your poultry than ever before. Hundreds of poultry raisers have told us that, with our help, they have made their poultry pay better than any other branch of their farm. It costs thousands of dollars to experiment, therefore you should take advantage of the results of this experimental work and reap the profit.

The day of the horse and buggy is gone, as is the day of the hen setting on a dozen eggs. You cannot hope to realize the profits you must make from your poultry by only raising a few chickens, or by trying to raise a large number of birds with improper equipment, or by improper feeding, or by using the same methods as were used in the days of the horse and buggy. But if you will take advantage of the thousands of dollars spent in experimental work, by caring for your poultry in a modern practical way, you too will make your poultry the most profitable department on your farm.

Throughout this service book, we offer you advice and the results of experimental work, and we maintain a Service Department headed by our Mr. C. W. Gamble to work with you and help you realize Poultry Profits.

The WEDGE-WOOD HATCHERY

715 North Vermilion Street

Pontiac, Illinois

This is the home of Wedge-Wood Quality chicks. Our equipment, installed in this hatchery, is the finest that can be purchased to produce strong, healthy chicks. Every modern, scientific invention is included in our equipment which assures customers the best of quality in their chicks.

It is the purpose of Wedge-Wood to produce only pure bred chicks from vigorous healthy parent stock. High quality chicks at standard price. Our capacity is large enough to take care of reasonable demands but not too large to give personal attention to all details which are absolutely essential in producing strictly quality chicks. We are not going to hatch one and one-half million chicks during the season of 1928. We emphasize quality and not quantity in our chicks.

Wedge-Wood Service Follows Wedge-Wood Chicks

Wedge-Wood Service

A Department Designed for the Betterment of
the Poultry Industry

F. A. HOUGLAND, president and General Manager of the Wedge-Wood Poultry Farm & Hatcheries, Inc., is justly recognized for his real constructive work in the breeding of high egg producing flocks. By the introduction of profit producing flocks and scientific brooding methods he has materially aided the march of farm progress in his community. His past business experience accounts for the excellent and satisfactory handling of the large number of orders which must be booked, filled and shipped exactly when specified by customers.

Introducing Our New Service Manager

C. W. GAMBLE
Service Manager

To help you realize greater profits from your poultry we have engaged the services of Mr. C. W. Gamble, Iowa State Agricultural College. Mr. Gamble is a practical poultryman, having been engaged in service work and as the successful manager of large poultry farms, including his own, for the past six years. All during the fall he carried out a vigorous program for increased production in the Wedge-Wood pure bred breeding flocks by careful culling and mating. Feel free to consult with our service department at any time concerning your poultry problems. We will be glad to consult with you concerning the planning of your flock, housing, feeding and care of the livestock at all times. We will do anything in our power to help you overcome the diseases which attack your poultry. Remember this service is absolutely free to you. Let us help you solve your poultry problems.

JOE SODES
Foreman

Important to the high standard of the Wedge-Wood Quality chicks is the management of the hatching plant. Our foreman, Mr. J. Sodes, maintains careful watch at all times over the mammoth incubators. Inasmuch as the health of your chicks is greatly influenced by the incubator in which they are hatched, we have a type of incubator in which the various factors, such as moisture, heat and fresh air, are so definitely controlled that we are able to produce strong, vigorous, liveable chicks.

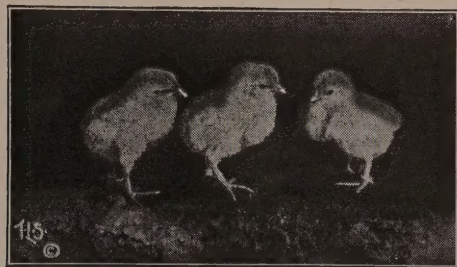

Wedge-Wood Service Follows Wedge-Wood Chicks

Wedge-Wood Poultry Farm & Hatcheries, Inc.

What Our Service Means to You

1. Delivery of guaranteed pure bred chicks, from Hogan tested flocks, exactly when you specify.
2. Consultation at any time trouble develops in your flock, with free post-mortem examination of ailing chick or matured bird, together with suggestions on checking the trouble.
3. Practical advice on any subject pertaining to poultry raising, whether it is housing, brooding, correct feeding, or health of birds.
4. Realizing the importance of culling all laying flocks, we offer, at a minimum charge, the services of our Service Manager in correctly culling and mating for high egg production the flocks of customers desiring this service.
5. Reliable market reports.
6. Valuable information in booklets free to you, including Building Plans, Specifications, Health and Disease, Feeding Charts, Production Records, Cost and Profit Records, Bulletins on Disinfecting Houses and Runs.

Our customers are entitled to the best. We produce healthy, husky chicks from our splendid flocks, using up-to-the-minute mammoth incubators that do the work even better than nature herself.

Wedge-Wood Service Follows Wedge-Wood Chicks

A PURE BRED, CULLED, CORRECTLY HOUSED WEDGE-WOOD BREEDING FLOCK

Care of Wedge-Wood Breeding Flocks

We Do Not Set Any Eggs Except Those Produced by Our Own Supervised Breeding Flocks

In order to produce high grade chicks we maintain strict supervision of all breeding flocks. Absolutely every bird that we breed from is strictly culled for size, type and color, Hogan tested for high egg producing qualities, and correctly mated. In addition to these strict requirements, every breeding flock is fed a balanced mash ration which insures strong, vigorous chicks. The housing conditions are checked and a constant inspection is maintained throughout the breeding season to assure the health of the breeding flock. All breeders are required to keep egg records, and in the past few years, through our careful system of mating and culling, we have increased the average flock production over 33%. The average correctly culled and mated farm flock hen will produce 120 eggs yearly. Our Wedge-Wood Utility Quality birds produce an average of 165 eggs per year while our *Super Wedge-Wood Quality Birds* will produce 200 to 220 eggs per bird per year. We are recognized throughout the middle west for the high quality, high egg producing stock we produce. Our service manager is constantly in the field giving strict supervision to the breeding flocks. As a result of this care, coupled with our strict requirements, we know we produce fast laying, fast paying chicks far above the average.

Under such a system we can never produce a million chicks a year and we never expect to. *Our aim is quality not quantity and quality always pays in the long run.* You may find cheaper chicks than ours but you cannot buy *better chicks* than Wedge-Wood Quality!

Wedge-Wood Service Follows Wedge-Wood Chicks

When You Buy Wedge-Wood Quality Chicks

We do not profess to produce prize winning show stock, however, in our various breeding flocks, we have a great many birds that are eligible to entry in the national poultry shows and we have hundreds of birds that are eligible to entry in Egg Laying Contests. *Wedge-Wood Quality Chicks will produce 4 dozen to 8 dozen more eggs per bird per year than any other chick you can purchase.* Under our careful system of breeding, culling and mating, we are producing high grade chicks that will pay you from \$1.70 to \$3.00 more per bird per year *than any other chick you can purchase.* For this additional profit to you we will charge you approximately 3 cents to 5 cents more per chick than you will pay elsewhere. *Isn't the original difference in cost well worth while?*

Wedge-Wood Utility Quality Chicks of all breeds will produce an average of 165 eggs per bird per year and will mature from 2 to 3 weeks quicker than the average bird that has not been correctly mated, housed and fed. All Utility Quality Chicks ("Mixed

Wedge-Wood Service Follows Wedge-Wood Chicks

Chicks" excepted) are true to breed, from breeding flocks correctly culled, mated, housed and fed, and, when correctly matured, will pay you large dividends in profit and satisfaction.

Wedge-Wood Super Quality Chicks

For the past several years, in the careful culling and mating of our various breeding flocks, we have kept an accurate check on egg production from each individual flock. We have found, in a great many cases, that there are a number of flocks of much higher egg strain than other flocks. Therefore each year we have spent hundreds of dollars to mate these birds to males purchased from recognized breeders throughout the United States, to materially increase the flock egg record. We are now in position to offer you chicks that will mature into high egg producing strains from these *Super Quality Flocks*.

These Super Quality Wedge-Wood Chicks will produce, in profits to you, approximately 20% more than the Utility Quality Chicks. Bring up your flock average by introducing Wedge-Wood Super Quality Chicks.

Our Three Point Inspection Safeguards You

1. All breeding flocks are strictly culled and mated, correctly fed and housed and regularly health inspected by our service manager.
2. All hatching eggs from these Wedge-Wood breeders are graded as to size and shape and incubated correctly throughout the 21 days.
3. All chicks are carefully graded and culled for high quality before they are delivered to you.

Repeat orders come from satisfied customers. The way we treat our customers makes them fast friends. We produce for them the best chicks obtainable, insuring their success as well as our own. Great care is exercised to insure quality and vitality in every chick hatched.

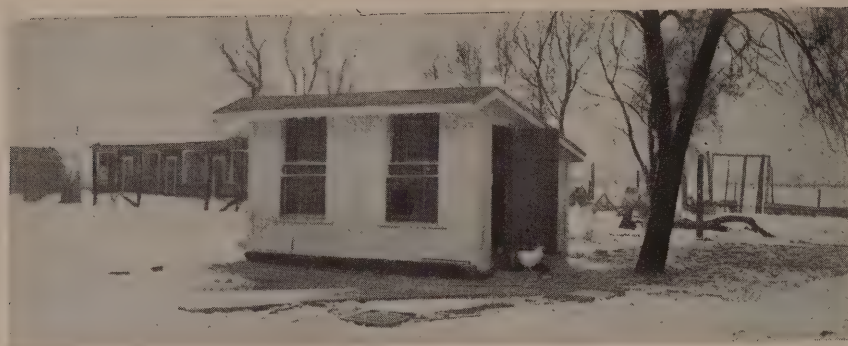

The Tried and Tested Wedge-Wood Way of Brooding Chicks

In order to obtain the best results from your chicks it is absolutely essential to provide them with good quarters. A good brooder house is a good investment and will pay for itself many times over in one season. You cannot expect to raise a good percentage of your chicks in just any kind of a shack. No matter how strong and healthy your chicks are, they cannot develop unless properly cared for.

The brooder house shown on following page is simple in construction and inexpensive. It is built on skids so that it may be moved from one place to another, thereby giving each brood of chicks new ground to run on, and aiding in sanitation. The complete bill of material for this type of house costs \$78.50 at your lumber yard, and two men can build the house in 1½ days. This work can be done by you and save the construction costs. *We furnish free a 12 page booklet giving complete plans and specifications*

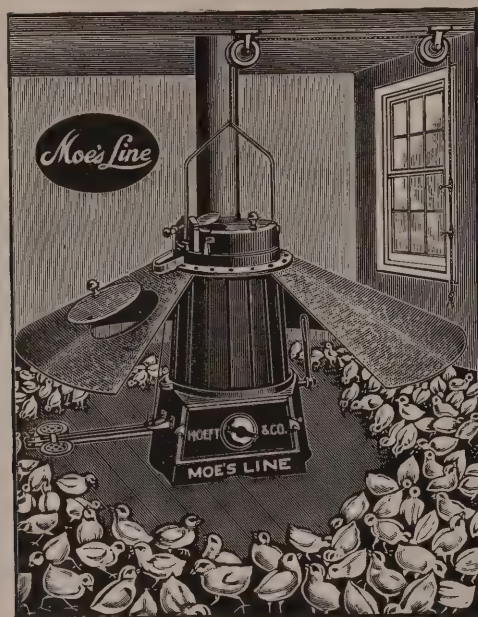

Wedge-Wood Service Follows Wedge-Wood Chicks

The Tried and Tested Wedge-Wood Way of Brooding Chicks

for this brooder house. It is a very simple task to erect this house by following the plans outlined in this booklet.

After you have provided yourself with the house, get the following equipment which is necessary to brood 500 chicks. *It is just as easy to brood 500 chicks as it is to brood 100 chicks.*

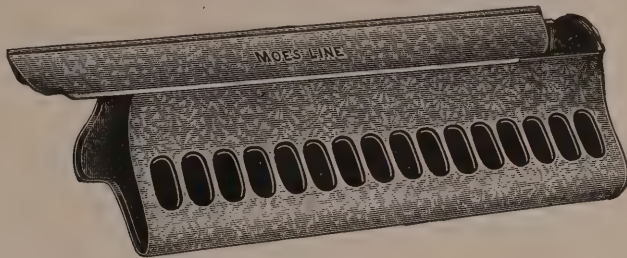

The Moe Hard Coal Brooder stove at \$26.50 has a 56" canopy beaded around the edge to prevent sagging. This stove is capable

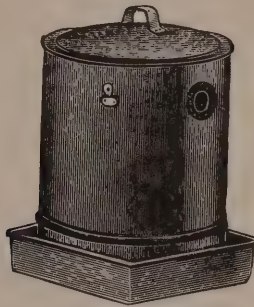

Wedge-Wood Service Follows Wedge-Wood Chicks

The Tried and Tested Wedge-Wood Way of Brooding Chicks

of brooding 500 chicks in the above house. We can furnish you with a 48" canopy stove capable of brooding 400 chicks for \$21.50, or a 42" canopy stove capable of brooding 300 chicks for \$16.50. The Moe stoves are very reliable and guaranteed and the two larger size stoves will hold a good fire for 24 hours without re-fueling. They are very reasonable in price and we have found them thoroughly reliable in every respect. *We carry a complete stock of coal, electric and oil stoves at all times, including the Simplex oil stove.*

Correct feeders and water fountains are not only necessary but save time and labor as well as feed. To brood 500 chicks you must have at least 4 large capacity feeders. These feeders cost from 35 cents to \$1.80 each.

This fountain holds 1 gallon of water and is made of galvanized iron with double walls, is easily filled and feeds automatically. It can be set on the litter and the sides are high enough that the chicks will not scratch the litter into it and at the same time they can drink out of it with ease from the time they are a day old. As the chicks advance in age the fountain can be hung up on the wall at any height.

This fountain, like the above hopper, will be the only water fountain necessary to buy until the chickens are ready for the winter

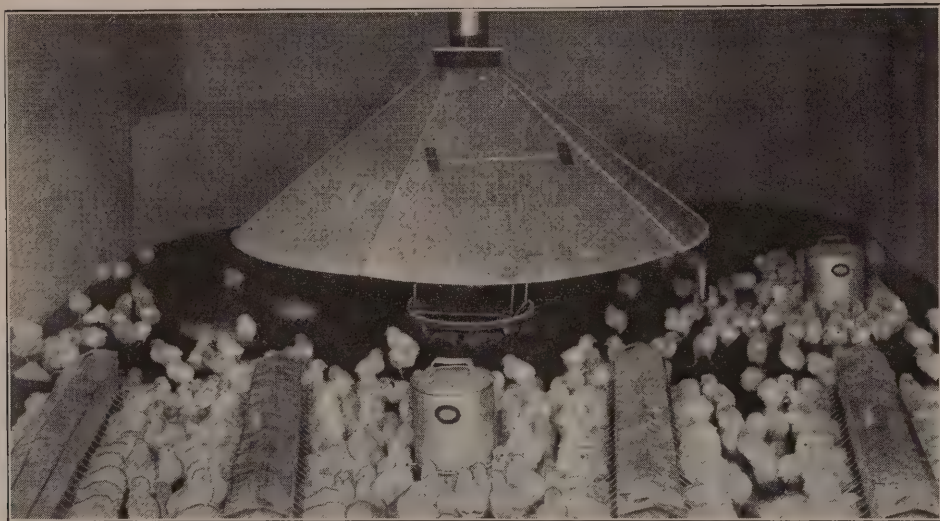

WEDGEWOOD FLOCKS *from* WEDGEWOOD CHICKS

The Tried and Tested Wedge-Wood Way of Brooding Chicks

fountains in the laying house. If you have ever brooded chicks you will know how hard it is to keep *clean* water in front of them at all times. This 1 gallon fountain solves this problem. The cost is but \$1.75 each and in lots of five or more, \$1.65 each.

THIS PHOTO SHOWS YOUR 10 x 12 BROODER INTERIOR WITH 500 CHICKS. NOTICE THE BROODER STOVE, THE LARGE CAPACITY FEEDERS AND 1 GALLON DRINKING FOUNTAIN DESCRIBED ABOVE. BROODING CHICKS, WITH THE PROPER EQUIPMENT, IS A PLEASURE INSTEAD OF A LOT OF HARD WORK AND FAR MORE PRODUCTIVE OF GOOD RESULTS.

Now comes the most difficult problem of brooding chicks. *Poultry Statistics show that more chick fatalities are traced to improper litter than any other cause.* You must realize that whatever litter you put on the floor the chicks are picking in constantly, and if there is any disease, mold, dirty feed, or dampness in the litter that the chicks will suffer from it. If you use alfalfa or corn chaff for litter you undoubtedly will have losses because 95% of all corn chaff, straw or alfalfa leaves contain a certain percentage of mold, and when the chicks scratch around in this litter they breathe the mold spores which are flying around and they contract Aspergillosis (Brooder Pneumonia) which is fatal to chicks and can only be cured by *removing the cause.*

The Tried and Tested Wedge-Wood Way of Brooding Chicks

We cannot emphasize too strongly the importance of using a good litter. We have experimented with numerous litters and found that O. K. Sanitary Poultry Litter is the best litter for brooding chicks that we have ever used. O. K. Sanitary Litter is imported and made from peat moss. There are numerous peat moss litters on the market but we have found that O. K. Sanitary Litter is the most economical and of far better quality than any other similar litter. One bale of O. K. will cover a 10 x 12 brooder floor sufficiently for correct brooding. O. K. Litter is a great labor saver because you do not have to change the litter during the entire brooding of your chicks. It is highly absorbent and will absorb eight times its weight in moisture, therefore assuring you that your brooder will always be dry. It keeps the chicks clean as it absorbs the droppings instantly and does away with any unpleasant odors. It reduces the fire hazard in the brooder house because it takes an intense heat to even make O. K. Litter smoulder and it will never blaze. Besides all these good points and many others *there is absolutely no danger of any infection from mold.* The cost of this litter is \$5.00 per bale, but because we buy it in car lots, we can offer it to you at \$4.50 per bale. If you only save 4 chicks as a result of using O. K. Litter, it will pay for itself, *but you will undoubtedly save at least 10% more chicks by using it.* You can readily see that it is a worth while investment and should be given careful consideration in the brooding season.

We carry a large stock of this litter at all times. Mail us your order and we will make immediate shipment.

NONE GENUINE WITHOUT THIS
STAMP ON EVERY BALE

*It pays to buy Wedge-Wood Quality chicks.
Quality and Vitality means the ability to produce
eggs in large numbers and the best of poultry meat.*

Care of Chicks After Arrival

After you have provided yourself with a good house, and equipped it ready for the chicks the following instructions are to be followed. This method of brooding chicks has proven very satisfactory with thousands of customers, and therefore we recommend that you follow it very strictly.

AGE	Globe "All Mash" Starting Ration Use no scratch grain.	Charcoal and Grit	Water and Green Feed	General Management
1st Day	None	None	None	Put chicks under brooder. Give each chick drink of warm water with 1 teaspoon of Germozone to each quart of water.
2nd Day	None	None	Give warm, clean water	
3rd Day	Put Globe "All Mash" Starting Ration before chicks in hoppers. Keep feed before chicks all the time.	Put fine grit and charcoal before chicks in hoppers	Give plenty of warm, fresh, clean water	Keep brooder temperature 100° F. at edge of hover near floor. Be sure there are no draughts. Keep chicks confined around hover by a wire stretched one foot from edge during the night.
4th Day	Keep Globe "All Mash" Starting Ration before chicks in hoppers all the time.	Put fine charcoal and grit before chicks in a hopper.	Give plenty of warm, fresh, clean water. Supply green feed in form of alfalfa leaf meal, green grass or clover.	Remove wire screen from around hover during day but replace at night. Keep temperature of brooder at 100° F.
5th Day to 6th Week	Keep Globe "All Mash" Starting Ration before chicks all the time, supplying plenty of hopper space.	As above	As above	Remove wire screen. Let chicks run out of doors during warm days, being sure they do not get chilled or wet. Gradually reduce temperature of brooder.
6th to 8th Week	Feed Globe "All Mash" Starting Ration and Globe "All Mash" Growing Ration mixed in equal amounts.	As above	As above. Supply large drinking vessels. Keep clean.	Give chicks range on ground not previously contaminated by diseased chickens. Do not crowd.

We offer you without cost the use of our Service Department. Our men are experienced in the poultry industry, which enables us to aid you in any of your poultry problems. May we help solve your problems?

What This
Man Has
Done, You
Can Do,
With
The Globe
All-Mash
Method:

E. G. Bennett, Saunemin, Ill., writes:

"The most rapid development I have ever had on any feed. I have 1½-pound chicks that are 7 weeks old. I have saved over \$4.00 per 100 chicks in the feed cost to date. I have used every kind of feed on experiments in the past but Globe All-Mash beats them all."

THE
**GLOBE
ALL-MASH
METHOD**

Serves a Three-Fold Purpose:

1. Chicks are healthier—they don't have to scratch in dirty litter for feed.
2. Labor is saved because feedings are fewer.
3. Less feed is wasted because none of it is fed on the floor.

Robert Snyder, Cornell, Ill., says:

"Wedge-Wood Quality checks are certainly the strongest and healthiest chicks I have ever had. The rapid growth and simple feeding method of Globe All-Mash Starter saves a lot of time and money. I have raised over 90 per cent of my chicks and they will be ready for market two weeks quicker than they were last year at a total saving of over \$25.00 on the feed cost."

Descriptions of Breeds of Wedge-Wood Quality Chicks

Single Comb White Leghorns

This is one of the most popular varieties of domestic fowls. They are bred particularly for egg production and a number of strains have been produced in which the laying trait is wonderfully developed. Those who want real egg machines, a fowl which will produce great quantities of eggs, both winter and summer if properly housed and fed, will be fully satisfied with the White Leghorns. They are also excellent eating, providing very fine grained meat of excellent flavor.

Rhode Island Reds S. C. or R. C.

This is another American-made breed which has attained great popularity. They are not only excellent table fowls but great layers as well and are very hardy. The only difference in the two varieties is in the comb, one being single comb, similar to the Barred Rock, and the other the rose comb. Chicks from our flocks of heavy laying Reds are sure to please and prove profitable.

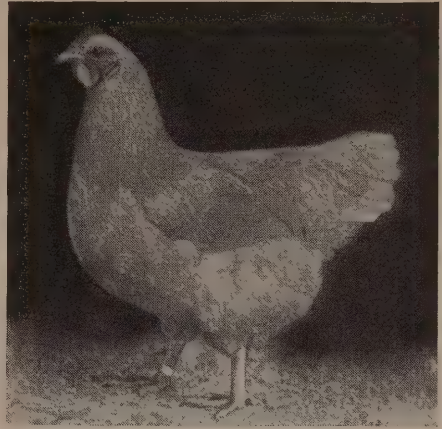

Wedge-Wood Quality Chicks are healthy and active, real money makers. Do not delay. Order now. Our service begins when the order is received.

Descriptions of Breeds of Wedge-Wood Quality Chicks

Buff Rocks

The Buff Rock was originated by using the Barred Rock in cross on Buff breeds, probably Buff Cochins largely. The Buff Rock is the same size, style and shape as the Barred Rock and is also equal in size and meat qualities. They are also excellent layers. Our Buff Rock flocks have been carefully bred to fix the laying trait strongly in them and will prove very satisfactory to our customers.

Buff Orpingtons

This breed is of English origin and is a large fowl of compact, blocky build. The plumage is a rich, beautiful buff. They are splendid, all-the-year-round layers and particularly good winter layers. The Buff Orpington is perhaps at this time the most popular of all buff varieties. They are splendid meat fowls, in fact unexcelled for this purpose. Our Buff Orpingtons are second to none as producers of good, hardy chicks which develop into excellent layers.

Descriptions of Breeds of Wedge-Wood Quality Chicks

White Rocks

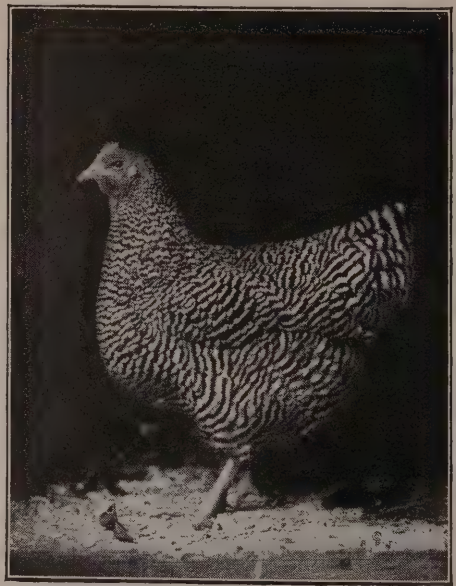

This variety is very much favored by people who prefer a white fowl. Our White Rocks are excellent layers and as meat fowls they are simply unsurpassed. When dressed they show no black pin feathers, which is a strong point in their favor as broilers or roasters.

You will get a square deal and be perfectly satisfied with Wedge-Wood Quality Chicks. Phone, telegraph, write or call. The most careful attention given to every order. We pack our pure bred chicks in best containers, ship by prepaid parcel post, or you can call for your chicks when they are ready.

Barred Plymouth Rocks

The Barred Plymouth Rock is still recognized as the peer of the American class of fowls to which it belongs. The merits of this variety are so well known that it is useless for us to repeat them. We can only say that our flocks rank high in egg production and we are aiming to keep as near standard requirements in the breeding of them as we possibly can without sacrificing egg production.

Our Barred Rocks are the equal of any to be found and we feel sure you will be highly pleased with what we can supply you in this variety.

Descriptions of Breeds of Wedge-Wood Quality Chicks

White Wyandottes

The White Wyandotte is not only acknowledged the most popular variety of the Wyandotte family but in many sections of the country it is most highly favored as an all around general purpose fowl. The Wyandotte is a beautiful bird with its rose comb and deep, round body full of graceful curves. This variety is bred in large numbers so we have some very fine flocks and can furnish chicks in quantities.

We invite you to visit our Hatchery and see for yourself the methods we use in hatching chicks.

Super Wedge-Wood Quality Chicks

These chicks are from our finest matings. Pens are headed by males direct from such well known breeders as E. B. Thompson, Parks, John S. Martin, Owens, Ferris, Hollywood Farms, etc. The females are of the finest, culled and selected by our Mr. C. W. Gamble and mated to these high grade males. These matings will give you some of the finest stock obtainable for quick producing birds and also birds that will give you high egg production. If you wish to raise the standard of your flock in quality and increase your egg production it will pay you to pay a few cents more per chick and buy *Super Wedge-Wood Quality Chicks*.

Are you interested in the pleasure and profit in poultry? Order now—Wedge-Wood Quality Chicks.
